

# BASIC DOCKER COMMANDS

1 of 1

Like many applications, Docker has its own set of command-line interface (CLI) commands, and options (arguments) that work with those commands. Below is a list of the most common commands used.

## COMMON CLI COMMANDS

<u>Command</u>	<u>Description</u>
Docker build	Builds an image from a Docker file
Docker exec	Runs a command in a running container
Docker pull	Pulls an image or a repository from a registry
Docker push	Pushes an image or a repository to a registry
Docker run	Runs a command in a new container
Docker stop	Stops one or more running containers
Docker tag	Names and allows image to be pushed to another registry

## COMMAND OPTIONS (ARGUMENTS)

The following resources provide the options associated with the commands listed above.
